EDUCATION

University of Chicago, Chicago, IL

Master of Arts in Economics

Sep 2026 – Jun 2027 (expected)

Coursework: Introduction to Price Theory, Introduction to Empirical Analysis, Introduction to Advanced Macroeconomic Analysis; six graduate electives (Winter–Spring 2027)

Pontifical Catholic University of Peru (PUCP), Lima, Peru

Licenciatura in Economics, thesis awarded highest honors

Dec 2018

Bachelor's Degree in Social Sciences, Major in Economics

Feb 2017

RESEARCH

Journal Publication:

Guevara, C. & Rodríguez, G. (2020). “The Role of Credit Supply Shocks in Pacific Alliance Countries: A TVP-VAR-SV Approach”. *North American Journal of Economics and Finance*, 52, 101140. Based on my Licenciatura thesis.

Working Papers:

Guevara, C. (2021). “A Quantitative Analysis of Time-Varying Fiscal Multipliers and Their Determinants”. *Consejo Fiscal de Perú*. First version awarded Best Paper, Macro-Fiscal Research Issues Contest, Fiscal Council of Peru (2018).

Bhattacharya, R., Goumilevski, A., Guevara, C., Lesniak, M., & Lutz, F. (2026). “Explaining Cross-Country Heterogeneity in Debt Overhang Thresholds”. *IMF Working Paper 2026/051*.

EXPERIENCE

International Monetary Fund (IMF), Washington, DC, USA

Research Analyst, United States Desk

Sep 2024 – Aug 2026

- Led the quantitative analysis of U.S. firm-level markups using Compustat data for 52 BEA industries (1997–2025), implementing the ACF two-stage GMM production-function estimator in R and applying a dynamic Olley-Pakes decomposition of the post-pandemic markup increase into within-firm, reallocation, entry, and exit components.
- Built and estimated a structural probability-of-default model for 401 U.S. banks (2000–2025), extending the Merton framework to incorporate dividends and an absorbing barrier and using LSEG market and balance-sheet data to estimate default probabilities and identify pockets of vulnerability in the U.S. banking system.
- Maintained and extended a daily R-based machine-learning nowcasting model for U.S. GDP (elastic-net/LASSO) and adapted the methodology to forecast U.S. foreign labor-force inflows using a novel administrative dataset constructed from State Department visa records with Python-based OCR. Both projects informed World Economic Outlook projections and the *2026 Article IV Consultation with the United States*.

Research Analyst, Front Office

Jan 2024 – Aug 2024

- Built and estimated a state-space model using the Kalman filter to recover country-specific time-varying debt-to-GDP thresholds as latent states and analyzed the drivers of cross-country heterogeneity (IMF Working Paper 2026/051).
- Led the quantitative analysis of the firm-level productivity costs of crime in Latin America and the Caribbean, constructing a pooled cross-sectional dataset from World Bank Enterprise Surveys across 18 countries and estimating survey-weighted logit models with country and sector fixed effects.

Inter-American Development Bank (IDB), Washington, DC, USA

Consultant, Research Division

Jun 2020 – Aug 2023

- Analyzed heterogeneous firm responses to the Federal Reserve's pandemic liquidity interventions using a financial database of listed Latin American companies from Refinitiv and Capital IQ, constructing firm- and sector-level measures of revenues, leverage, fixed assets, cash holdings, and capital expenditure in Python and Stata, contributing to the CGD-IDB report *Healthier Firms for a Stronger Recovery*.
- Developed macroeconomic simulations using a Global VAR (GVAR) model spanning 42 countries to quantify the effects of external real, financial, and U.S. interest-rate shocks on GDP growth across Latin America and the Caribbean, informing scenario analysis published in the IDB's *Latin American and Caribbean Macroeconomic Reports*.

Central Reserve Bank of Peru (BCRP), Lima, Peru

Data Analyst, International Economics Dept.

May 2019 – May 2020

- Managed high-frequency administrative data on exports and imports, prices, and volumes and contributed to Peru's official external-sector statistics.
- Monitored oil, copper, zinc, gold, and gas prices and forecasted terms of trade using cointegration models and forward contracts.

Pontifical Catholic University of Peru (PUCP), Lima, Peru

Research & Teaching Assistant

Mar 2018 – Dec 2018

- Tutored 120 students on Macroeconomics I, Macroeconomics II, Econometrics I, and Econometrics II.
- Assisted faculty with research and presentations, systematized data from the IMF, World Bank, and Bloomberg, and wrote code in Stata, MATLAB, and Python for data analysis, visualization, optimization, and econometrics.

Peruvian Institute of Economics (IPE), Lima, Peru

Consultant, Economic Analysis Dept.

Mar 2016 – Jun 2017

- Analyzed regional economic activity using panel data and household and firm surveys and prepared policy reports on infrastructure, financial markets, monetary policy, and trade.

SOFTWARE

csdid (GitHub, Documentation) — 400,000+ downloads worldwide

Co-author of the Python implementation of Callaway & Sant'Anna's (2021) Difference-in-Differences estimator with multiple time periods. Built the treatment-effect aggregation routines and visualization tools.

TECHNICAL SKILLS

Python, R, Stata, MATLAB, LaTeX, Excel/VBA: Advanced

Power BI: Intermediate

C++, SQL: Basic

HONORS AND AWARDS

Chair's Scholar Award (\$40,000), University of Chicago (2026)

Outstanding Performance Rating, IMF Western Hemisphere Dept. (top 5 of 26 analysts) (2026)

Señor de Sipán Medal, Central Reserve Bank of Peru – 3rd place nationwide (2019)

Advanced Economics Course Scholarship, Central Reserve Bank of Peru (2019)

Best Paper, Macro-Fiscal Research Issues, Fiscal Council of Peru (2018)

Best Paper, Educational Issues Contest, Peruvian Research Society (2018)

Outstanding Performance in Economics Courses, Backus and Johnston (2015)
